

REGISTRATION & SURGICAL CONSENT FORM

Where your pet is a part of our family

Name of owner: _____ Date: _____
Address: _____ City: _____ Zip: _____
E-mail (1): _____ E-Mail (2): _____
Home phone: _____ Work phone: _____ ext. _____
Cell phone (1): _____ Cell phone (2): _____
May we contact you via text message? Yes__ No__ If so, pls list cell phone provider: _____
Pet's name: _____ Breed: _____
Sex: M ___ F ___ Spayed/Neutered: Yes__ No__ Pet's DOB: _____
How did you hear about J.M. Pet Vet? _____

MEDICAL HISTORY

Are your pet's vaccinations current? Yes__ No__ Did your pet eat this morning? Yes__ No__
Has your pet recently experienced vomiting, coughing, sneezing or diarrhea? Yes__ No__
Is your pet allergic to any drugs? Yes__ No__ If so, pls list drugs: _____
Is your pet currently on any medications? Yes__ No__ If yes, pls list medications: _____
Has your pet been ill or injured within the last 30 days? Yes__ No__ If yes, pls explain: _____
Would you like us to check any other problems? Yes__ No__ If so, pls list problems: _____

POTENTIAL COMPLICATIONS OF SPAY/NEUTER SURGERY

Common:

- > Scrotal swelling and bruising in male dogs that resolve without treatment.
> Self inflicted trauma to the surgery site, this includes suture removal by the animal, skin infections caused by licking or contact with unclean surfaces, and other damage.
> Hematoma or Seroma (a collection of blood or fluid) around the surgery site or in the scrotum, that will cause enlargement of the scrotum, but will resolve over time.
> Minor swelling or redness around the incision, often related to minor reaction to the absorbable sutures, this will also resolve over time without treatment.

Uncommon:

- > Anesthetic or surgical complications resulting in death.
> Other anesthetic or surgical complications resolving with treatment.
> Hernias resulting from breakdown of suture requiring surgical repair.
> Internal bleeding during or after surgery that can result in death.
> Surgical site infections at or around the suture site.
> Internal adhesions (scarring) that could impair gastrointestinal or urinary tract function.
> Possibility of other unforeseen complications.

- If your female pet is in heat, pregnant, or has pyometra (uterine infection), please be prepared for additional charges.
• If your male pet is cryptorchid (retained testicle), please be prepared for additional charges.
• Female animals will receive a small tattoo to their underside indicating they have been sterilized. This is a universally recognized tattoo that would prevent unnecessary surgery should your pet live with someone else in the future.

I, the undersigned owner or agent of the pet identified above, authorize the staff of J.M. Pet Vet to perform the above procedure(s). I understand sedation and anesthesia involves risk to my pet and that staff member will use all reasonable precautions against the injury, escape or death of my pet. If this animal should injure itself in an escape attempt, soil itself, become ill, be exposed to infectious disease or die while in the clinic, I will hold J.M. Pet Vet free of any responsibility and/or liability in connection with this procedure. All animals admitted must be current on rabies vaccinations and must be free of external parasites. Any animal found to have fleas, ticks or ear mites will be treated at the owner's expense. I agree to pay in full for services rendered at the time of discharge.

By signing below, you are indicating your agreement of the terms hereof in this surgical consent form.
